

Observer Data Sheet

Record events that will help the teacher assess the learner's progress and provide useful information both during and after the exercise. For example, you could record when a block is given, how many times an object is touched, or correct responses.

Symbol	What does it mean?

Use the table below to record data based on the symbols you created. You can also take notes. You can time each round to calculate the rate of reinforcement.

Reinforcers	Data and notes	Number of blocks	Number of minutes	ROR (blocks / min)
